

Design of Landscape Furniture in Shuangjing

Elderly-Friendliness

Beijing has become a DEEP AGING city

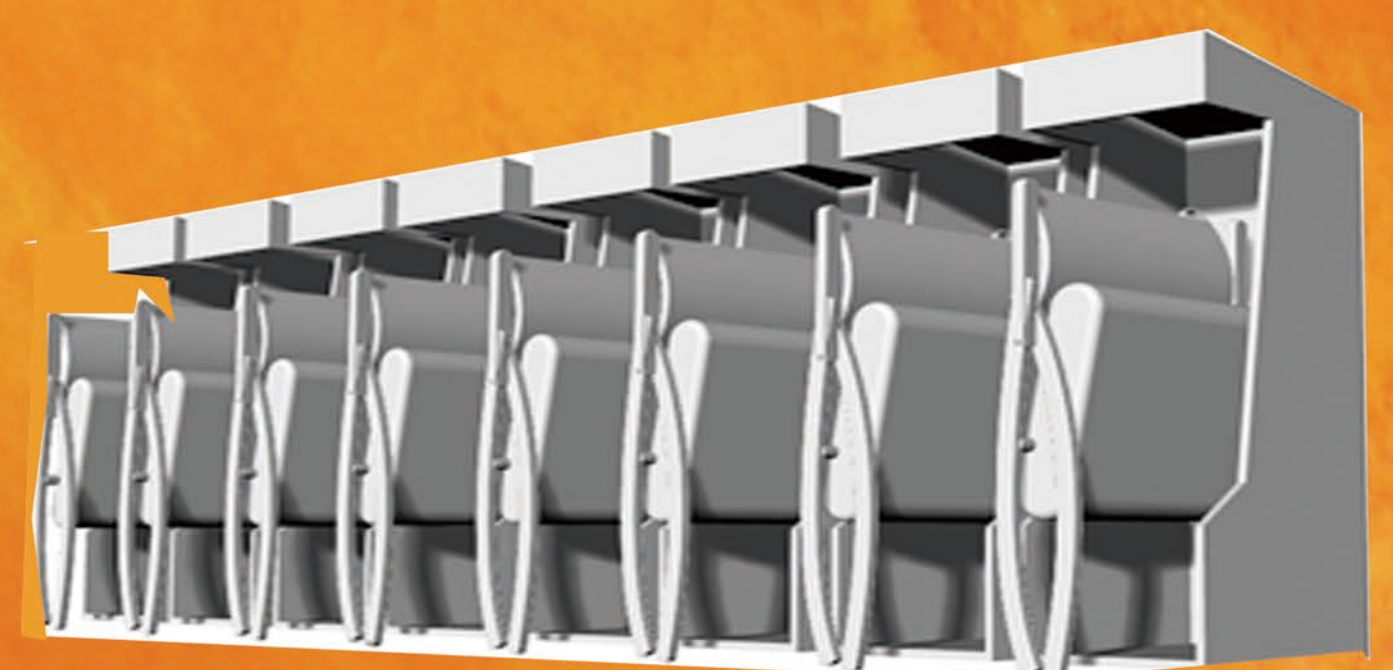

A 60+ elderly in EVERY 4 PEOPLE

The trend is STILL EXPANDING

Design 1: Shared Chair

The design of the seat fully considers the physiological and psychological characteristics of the elderly and meets the needs of the elderly to the greatest extent. In order to facilitate the management, a shared chair stake is designed in combination with the community card, and a set of management system is constructed for the shared chair system.

Design 2: Calligraphy Floor Tile

We carved the outline of the characters on the floor tiles. With the help of the outline, people who can't write can also enjoy the fun of calligraphy. Writing on the marble floor with water will leave traces.
